MERLIN LEGEND®

MLX Telephones

Feature-Rich, Multiline Digital Telephones Designed for Your Communications System

The **MERLIN LEGEND**® family of digital MLX (multiline extension) telephones are specifically designed to help you receive maximum benefit from the **MERLIN LEGEND** Communications System.

Available in black or white and a choice of display and nondisplay models, the **MERLIN LEGEND** MLX telephones provide powerful features that help make everyday business communication easy, effective, and productive. Simply select the phones that fit your needs and your budget.

The **MERLIN LEGEND** MLX phones also support ISDN (Integrated Systems Digital Networking)—the standard for high-speed, reliable digital communications—as well as system administration, maintenance, and attendant console functions.

Feature-Rich Digital Phones

The **MERLIN LEGEND** MLX family includes five models, some with displays optional, and all including digital technology. Depending on your work space, you can use the MLX phones on your desks or wall mount them for flexibility and convenience.

All of the MLX telephones have popular business calling features built-in, including:

- Speakerphone capability, for the convenience of hands-free conversation

- Hands-free answer on intercom (HFAI), for answering intercom or voice-announced calls without picking up the handset

- Hold, transfer, and drop

- Conference calling that allows you to bring up to two internal callers and two outside callers together in a single conference call

- A single volume control button, for adjusting ringer, handset, and speaker/intercom volumes

- A mute button, to turn the speakerphone microphone off so a caller cannot hear you

- A message waiting light (for use with optional voice mail)

- Programmable line/feature buttons

- A pull-out tray with instructions for using and programming specific telephone features.

Starting with **MERLIN LEGEND** R7.0, you can program your MLX telephones to block voice announcements when a user is on the phone, so the call is not interrupted by an announcement.

The **MERLIN LEGEND** MLX phones also work with a wide choice of optional voice mail applications to increase business productivity and efficiency. A 50-button Direct Station Selector (DSS) console can be used to expand the capabilities of the 20- and 28-button MLX models, for use by an attendant or operator. And, enhanced operation with optional headsets helps further build employee efficiency and performance.

Display Phone Capabilities

The **MERLIN LEGEND** MLX display models show the time, day, and date as well as an alarm clock and timer,

Headset Compatible

Contoured Handset

2-Line by 24-Character Display

Line/Feature Selection and Programming Tools

Message Waiting Light

Hands-Free Speakerphone

Pull-Out Reference Tray

Red Hold Button

Built-in Jack

MLX-28D®
Two-line by 24-character display phone with 28 line/feature buttons and a built-in DSS jack, for users who need more line/feature capabilities.

MLX-20L®
With 20 line/feature buttons and a seven-line display ideal for users who need expanded message and programming capabilities.

MLX-16DP®
Suited for users who want the convenience of a two-line by 24-character display and 16 line/feature buttons.

MLX-10®
With 10 line/feature buttons and also available in a display model.

MLX-5D®
The basics, in a phone with 5 line/feature buttons, with or without a display.

telephone directory, message center, and line/feature selection and programming menus. Simply by pressing the feature button, you can display the main feature screen.

Buttons labeled *home, menu, inspect,* and *more* let you navigate between different screens, where you can program the phone, view messages, and select features available only from the display. (Four unlabeled softkeys let you select corresponding displayed items.) You can also program unassigned line buttons for easy access to system features such as auto dial or voice announcement options.

In addition to showing the number you are dialing, the MLX phones can display caller information for incoming calls—the name and number of external[1] callers as well as the extension and coworker name for internal calls that you receive. This not only helps users handle calls more efficiently and increase caller satisfaction—it also saves you the cost of investing in separate Caller ID display units.

The Smart Choice for Your Communications Needs

The intelligent MLX telephones fully integrate with the *MERLIN LEGEND* system to give you powerful performance. And with the flexibility to choose the phone models that best suit your needs, you can grow your communications system in the way that is most cost-effective for your business.
